

electric wire rope hoist

DRH
series

 **donati**

DRH series, the most reliable and safe way of lifting

ELECTRIC WIRE ROPE HOIST

It guarantees maximum safety in hoisting up to 50.000 kg. The competence and experience in design and production, the quality of components used, the high technology employed in the production of mechanical parts, in the finish and in surface treatments as well as the certified quality system UNI EN ISO 9001:2008 which regulates all the company's activity, allow DONATI SOLLEVAMENTI to offer a product in line with the most modern international regularity standards.

The DRH electric rope hoist ensures use in a wide range of situations, reliability over time and safety in all operative phases.

The special hydro-repellent finish, obtained by an electrostatic process, guarantees long life and consistency in performance even in particularly hostile environments.

The company offers a 3-year guarantee starting from the date of delivery, all at a reasonable price.

**DONATI
SOLLEVAMENTI S.R.L.**
**INTRODUCES A NEW AND
EVEN MORE EVOLVED RANGE
OF DRH ELECTRIC WIRE
ROPE HOISTS.
SAFE, RELIABLE, COMPACT
AND ECONOMICAL.
THEY REPRESENT THE MOST
MODERN AND ECONOMICAL
MEANS OF LIFTING LOADS
UP TO 50.000 KG,
IN ABSOLUTE SAFETY.**

electric wire rope hoists

and trolleys

power and safety

at your disposal

ELECTRIC WIRE ROPE HOISTS AND TROLLEY

power and safety at your disposal

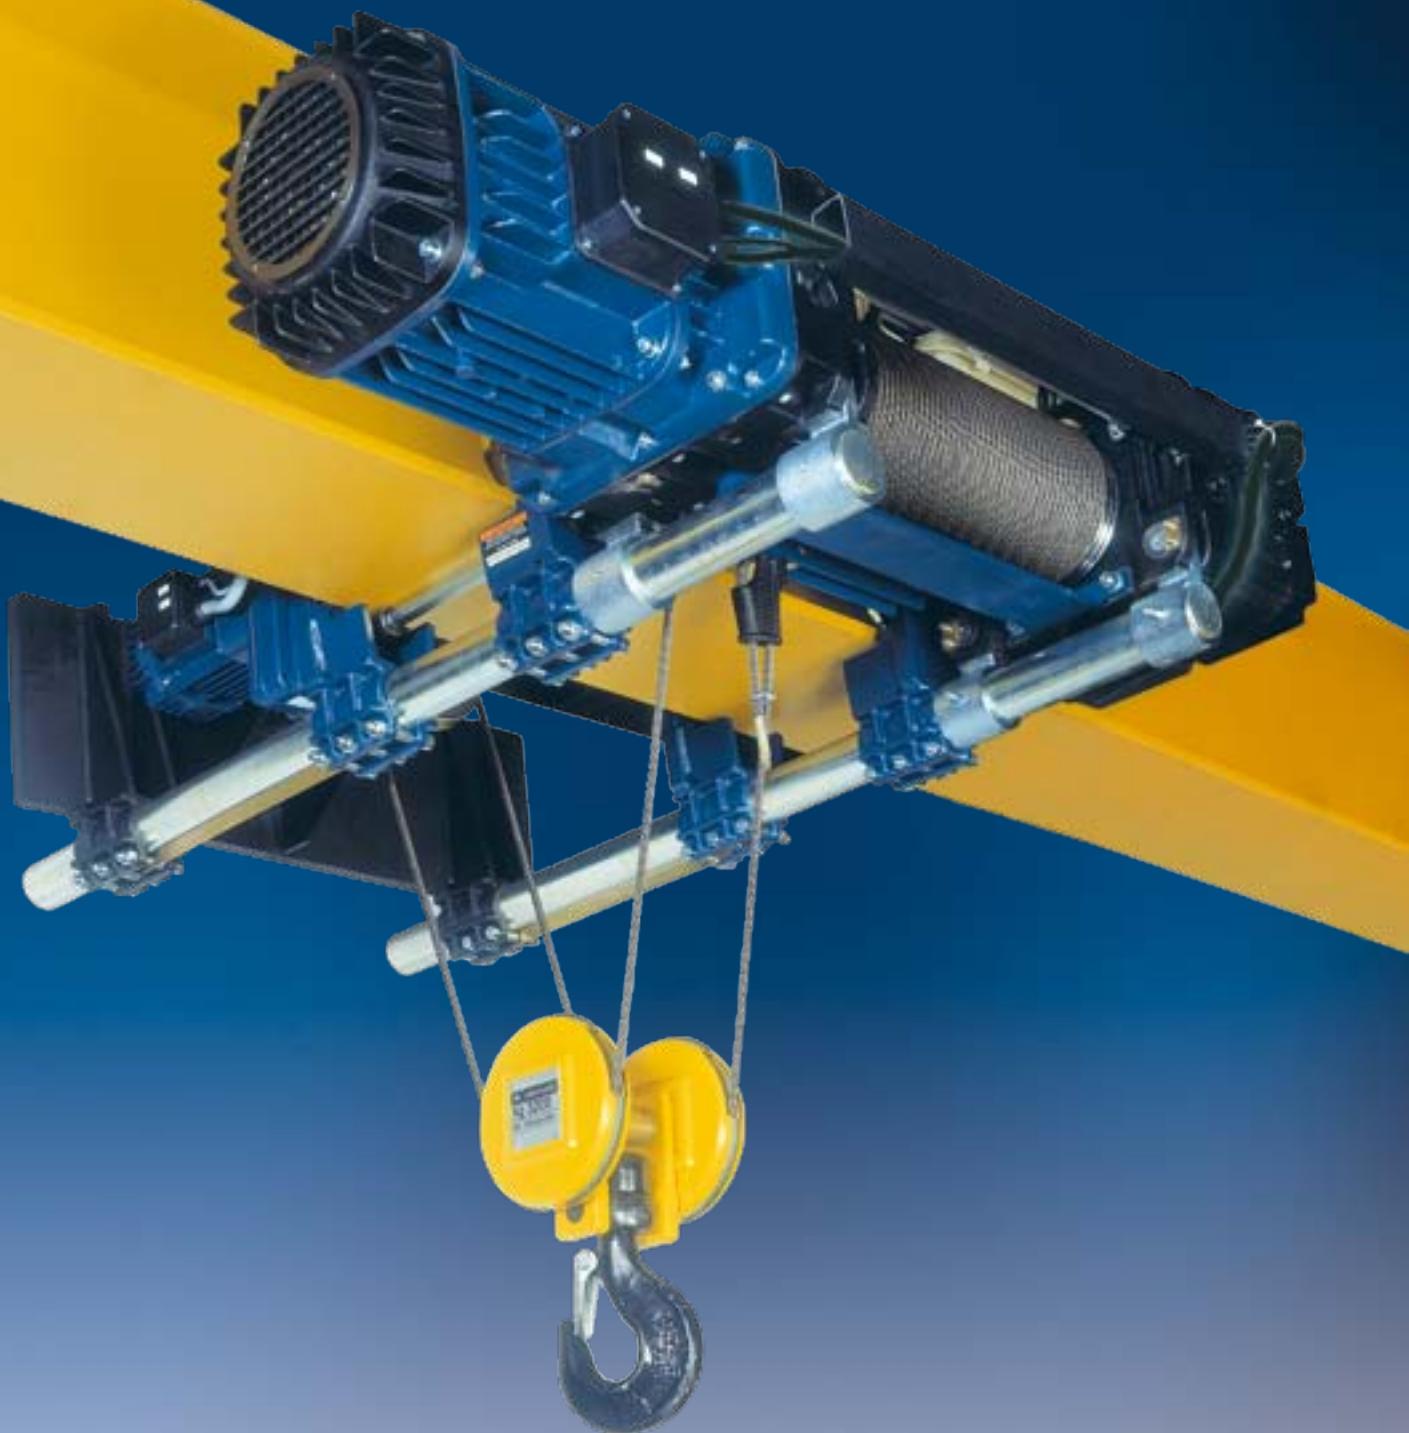

The hoist combined with a trolley which runs on one or two beams also allows horizontal movements.

All lifting (raise and lower) and traverse (right and left) movements are activated

electrically and can be activated via a fixed pendant, a radio-control system or infra red.

The range of the DRH series electric wire rope hoists has been developed in:

- **4 basic sizes**, DRH 1-2-3-4, to lift from 800 to 50.000 kg, in the FEM service group (ISO) 1Bm (M3) – 1Am (M4) – 2m (M5) – 3m (M6).
- **with one lifting speed** made with a 4 pole motor:
 - 4 or 6 m/min. for 4 rope falls hoists
 - 8 or 12 m/min. for 2 rope falls hoists
- **with two speeds** made with a 4/12 pole motor:
 - 4/1,3 or 6/2 m/min. for 4 rope falls hoists
 - 8/2,6 or 12/4 m/min. for 2 rope falls hoists
- **with three speeds** made with a 4/12 pole motor,
the micro speed is made by frequency control device
- **5 standard versions with a**: short (C), normal (N), long (L)
or extra long (X1 and X2) drum lengths, for hook runs from 4 to 58 m.

ELECTRIC WIRE ROPE HOIST

the range of the DRH series

Fixed configuration

This is the universal, basic configuration, with fixing eye-bolts that allow the DRH hoist fixing on a frame as a double girder trolley or in a suspended execution.

Configuration with monorail trolleys type DST/N/S

The DRH hoist is supplied in suspended execution with the normal headroom trolley or with the articulated one in case the unit has to run on curves. The trolley is electrically operated.

Configuration with monorail trolley type DST/R

In this configuration the DRH hoist is supplied in low headroom version for a maximum height of lift.

Configuration with double girder trolley type DRT

The DRH hoist can be fitted on the top of the double girder trolley frame or suspended. It can be supplied also in transversal execution. The trolley is electrically operated and run on two rails this configuration allows to obtain the maximum hookpath.

The DRH series electric wire rope hoists and relative electric trolleys are made with modular components. This allows multiple normalised or special executions to be made quickly, economically but most importantly, safely.

To guarantee maximum use of the hook run and minimum overall dimensions of the hoist body, the base components (motor, reducer and rope drum) are assembled in a coaxial line, by way of high strength bolted connections. Every connection can be inspected and has self-locking safety nuts. This type of construction, equally as important for the efficiency as for the safety of the hoist, is possible thanks to the extremely compact gear motor unit.

The rope drum on the side opposite the gear motor, can be connected to a cycle counter, selectors, limit switches, encoders, safety brakes etc.

Furthermore, being perfectly symmetrical in the special execution with drum right and left grooved, allows two gear motors to be installed thereby doubling the lifting speed but keeping the same capacity with a true vertical lift. This is a particularly suitable option for executions with large hook runs.

The assembly process uses the most advanced technology and highly industrialised production processes to produce, by economies of scale, totally reliable and technically innovative machines.

Enclosure and insulation of electrical components

- Hoist and trolley motors:
IP55 protection – Class "F" insulation.
- IP23 hoist-motor brake.
- Limit switch: IP65 minimum protection.
Maximum insulation voltage 500 V
- Cables: CEI 20/22 II
Maximum insulation voltage 450/750 V

Electric power supply

- DRH electric rope hoists are designed to be supplied with alternate electric current with three-phase voltage:
400 V – 50 Hz, in accordance with IEC 38-1
- Voltage and frequency different from standard are available on request.

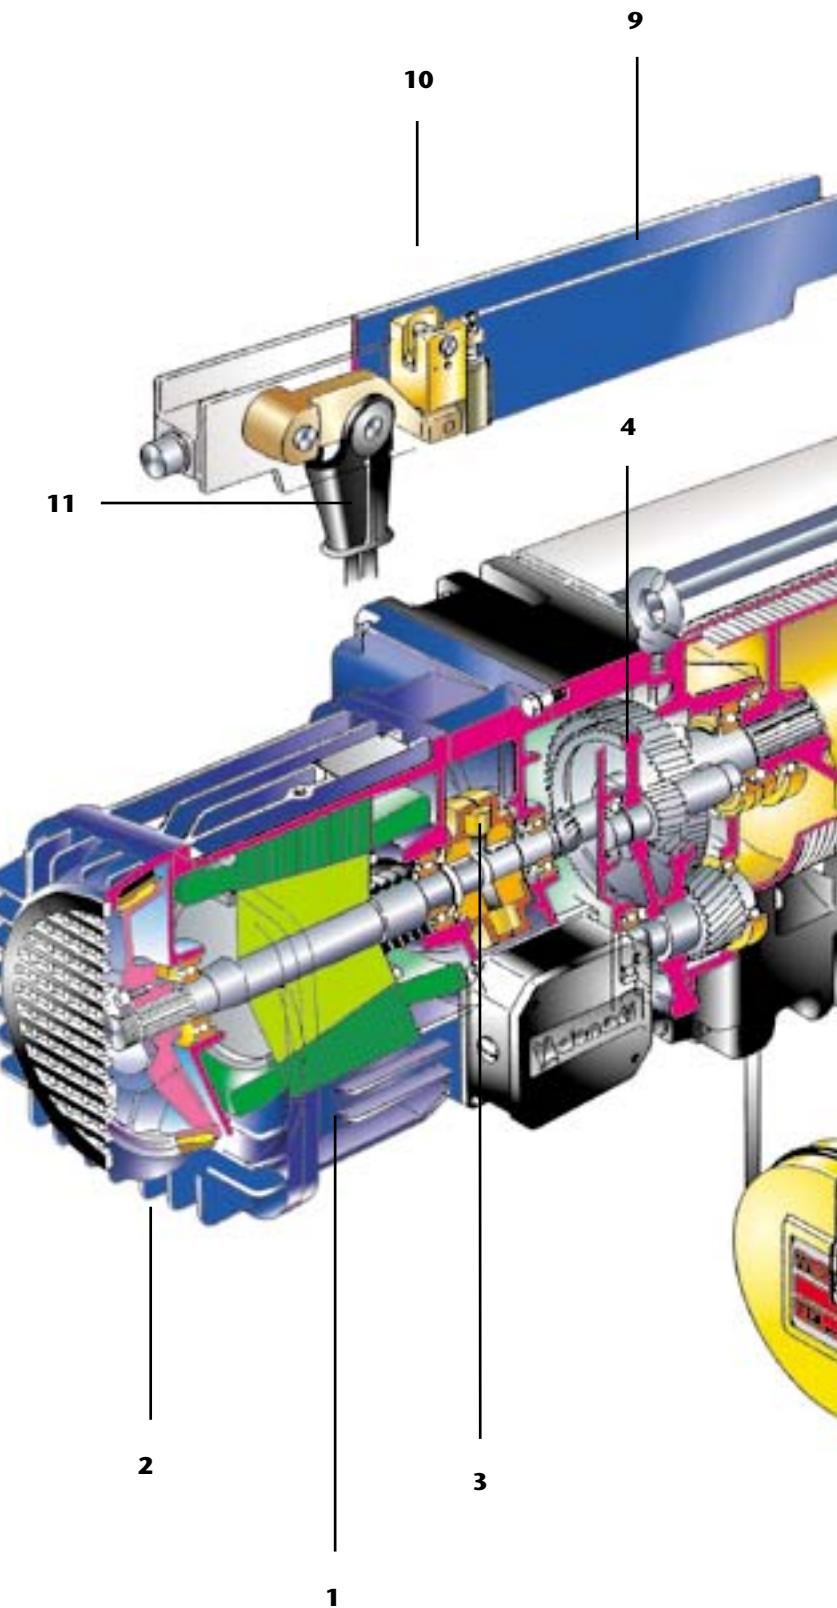

Working conditions

- Working temperature: minimum -10°C; maximum +40°C
- Maximum relative humidity: 80%
- Maximum altitude 1000 m above sea level
- The hoist must be installed in a well aired environment free of corrosive vapours (acidic vapours, saline mist, etc.)

Noise levels

- The noise level emitted by a fully loaded hoist is always less than 80 dB (A). However, the transmission of noise through metal structures and the reflection due a machine being located near a wall, are not included in the indicated value.

THE HOIST IN DETAIL

1. Electric motor for lifting

Asynchronous three-phase, self-braking with tapered motor. Minimum protection IP 55 – Class F insulation. It has thermal probes for protection against overloading.

2. Hoist's brake

The brake's lining is asbestos free. The brake block, which has a fan that guarantees the cooling of the brake itself and of the motor, moves axially with the motor shaft and the braking function is activated automatically if the energy supply fails.

(RES. 1.2.6 – 4.1.1.6 c – Attachment I Machine Directive).

3. Coupling

It's the connection between the self-braking motor and the reducer, allowing perfect axial sliding of the motor shaft.

4. Gearbox

Coaxial, with three stages of reduction, with cylindrical gears made of thermally treated, highly resistant steel, helicoidal teeth. Dimensioned and made to withstand the phenomena of stress and wear for life in relation to the normal FEM service group.

(RES. 4.1.2.3 – Attachment I Machine Directive).

The whole machine is mounted on spherical bearings lubricated for life in an oil bath.

5. Drum

The drum in steel casing, is mechanically grooved, and supported by the flange of the reducer and by the equipment side flange, with hubs with rotating broached holes on permanently lubricated bearings. The rope drum is made in line with the ISO standard 4308-1:2003 and UNI 9466:1994 and the FEM rules 9.661/86. The rope-drum support flanges have steel cylindrical pins in order to secure the components which suspend the hoist or which support it when set on machined seatings support the anchorage crossheads and the return pulley. The connection between the two flanges is made with bolted staybolts.

6. Rope guide

It has a threaded ring made of spheroidal graphite cast iron and allows the rope to be wound well onto the drum. [RES.4.1.2.4. – Attachment I Machine Directive].

The system automatically registers any play or wear which may occur. The rope guide includes sliding backlash arms made of brass, which, acting on the staybolts of the hoist, they function as raise and lower limit switches.

7. Raise and lower limit switch

It is a safety component which limits, in an emergency, the run of the hook in raise and lower.

[RES. 4.1.2.6. a – Attachment I Machine Directive]

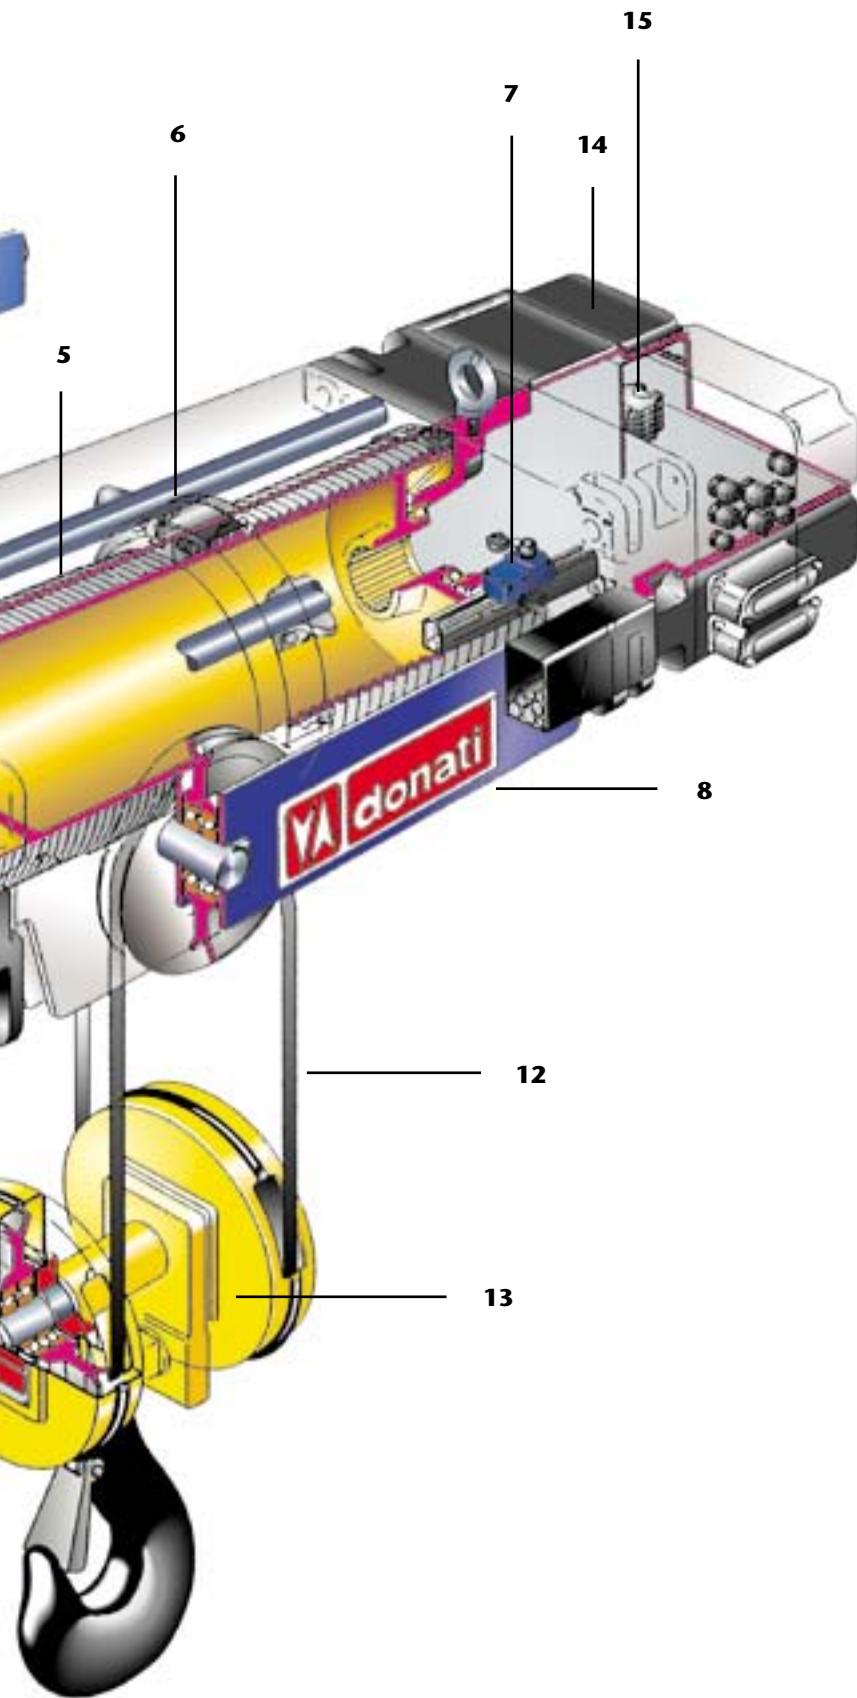

There are two micro-switches which work according to the positive slow opening principle and act on the auxiliary circuit of the control device of the hoist's motor.

8. Pulley assembly

Utilised in versions with 4 rope falls, and supported by two pivots which allow it to be orientated depending on the vertical axis of the rope. The return pulley is made of carbon steel. The rim has been grooved mechanically and the sheave rotates on bearings which are permanently lubricated.

9. Anchorage crosshead

Utilised in standard versions, and supported by two pivots which allow it to be orientated depending on the vertical axis of the rope. The overload device is located between the plates of the transverse.

10. Overload device

All the DRH series electric rope hoists have an overload device with a threshold level micro-switch.

[RES. 4.2.1.4. – Attachment I Machine Directive].

The overload device constantly measures and checks the values of the load and the dynamic and inertial effects due to its movement. Whenever the set levels is exceeded the micro-switch of the device starts by opening the control circuit of the lifting-controls device.

11. Wedge anchorage

The anchorage is made of spheroidal graphite cast iron. The minimum coefficient for use conforms to the FEM rule 9.661/86. The rope is secured with a wedge which stops it from unwinding.

12. Rope

Made of flexible steel, highly resistant to strain and wear. The minimum coefficient of use has been chosen to conform to the ISO standard 4308-1:2003. Non-twist ropes are used on DRH hoist with 2 falls and long (L) and extra long, 1st size (X1) drums, and on 2 and 4 fall hoists with extra long, 2nd size (X2) drums.

13. Hook block and hook

The return pulley is made of carbon steel and the rim has been grooved mechanically. It rotates on bearings which are permanently lubricated. The load hook is made of highly resistant drop-forged steel and is mounted on an swinging cross beam. It rotates on a thrust bearing and has a safety device to avoid unhooking.

[RES. 4.1.2.6 - Allegato I Direttiva Macchine].

14. Frame for electrical connections

Supplied on request. It has cable intake and allows the wiring of all the connections of the electrical equipment of the hoist and electric travel trolley, if present. The compartment for the electrical connections and/or any other low voltage control equipment, is closed with a shock resistant thermoplastic cover, IP 55 enclosure.

15. Low voltage controls

When the hoist is supplied complete with electric controls, the raise and lower and /or right and left functions of the trolley, are activated by electrical equipment which includes:

The transformer for control circuits.

- The main contactor and the contactors/reversing contactor for controlling the motors.
- The fuses for protection of the motors and transformer.
- The terminal board for the connections of auxiliary and power circuits.

The components are mounted on a hinged panel and fixed in a compartment located on the side opposite the motor. The controls are activated by a push-buttons-panel, supplied in AC at low voltage, 48V. The push-buttons-panel is ergonomically shaped, watertight and made of self-extinguishing, shock resistant, thermoplastic material. Its level of protection is IP 65.

The emergency stop [RES. 1.2.4.3 – Attachment I Machine Directive], is activated by voluntarily pushing the mushroom shaped button, which starts the control circuit [RES. 1.2.3 – Attachment I Machine Directive].

The push-buttons-panel is connected to the electrical equipment by a multipolar electrical cable with break-resistant metallic cores.

TROLLEYS

design and assembling process

Monorail electric trolley, types DST/N – S – R –

• Normal – Articulated – Reduced •

They are usually composed of an idler wheel and a drive wheel assembly, both have two wheels made of machined pressed steel, and mounted on spherical bearings which are permanently lubricated. The wheels of the drive wheel assembly are opposing and have a crown gear wheel and are connected, in the normal (N) and reduced (R) versions, by a transmission bar. The articulated version (S) has a double motoreducer, both of which directly give the wheels the movement. The steel supporting plates have anti derailment and anti drop device [RES. 4.1.2.2 – Attachment I Machine Directive] and have rubber buffers. Traveling is assured by one or two self-braking motors. They have tapered motor, progressive start up and braking, one or two speeds and one or two offset geared motors with gears with helicoidal teeth which are permanently lubricated in an oil bath.

Electric trolley

Normal monorail, standard headroom, type DST/N

In the normal version the trolley has supporting bars with circular cross-sections which support the hoist by a hinge-pin type suspension. The drive and idler plates can be adjusted along the bars in relation to the width of the running beam and are complete with brackets which have bolted joints. Both assemblies, drive and idler, are connected to each other with strengthening plates.

Electric trolley, monorail, reduced headroom, type DST/R

In the low headroom version the trolley has supporting bars with circular cross-sections which support the hoist in a set-down position. The drive and idler plates are sliding and can be adjusted along the bars, in relation to the width of the running beam, with brackets which have bolted joints. The trolley has a counterbalance on the supporting bar with a circular cross-section in order to balance the eccentric weight of the hoist.

Electric trolley, monorail, articulated, type DST/S

In the articulated version the trolley has supporting bars with circular cross-sections and brackets with hinged joints which support the hoist. The drive and idler plates are sliding and can be adjusted along the bars, in relation to the width of the running beam, with brackets which have bolted joints. Both drive wheel assemblies are opposing on the same bar and are independent from the two idler wheel assemblies.

monorail trolley

Electric trolley, double girder, type DRT

The wheels, two of which are driven and two are idler, are supported by a steel crab frame. The wheels, pressed from carbon steel, rotate on permanently lubricated spherical bearings. The double girder trolley has devices to avoid derailment and anti drop [RES. 4.1.2.2 – Attachment I Machine Directive] and rubber buffers.

Activation of traverse is assured by a self-braking motor with tapered motor, progressive start-up and braking, one or two speeds and one offset reducer with gears with helicoidal teeth which are permanently lubricated in an oil bath, which confer the movement to the drive wheels by a transmission bar.

The hoist can be fitted on the top of the trolley or can be suspended and transversal.

Traverse limit switches

On request all trolleys can be supplied complete with the limit switches [RES. 4.1.2.6 a – Attachment I Machine Directive].

Towing arm

A towing arm is available on request for all types of trolleys, adjustable in all directions, to connect the trolley/hoist to the electricity supply and to avoid breakage of the conductors.

Oscillating brackets for hoists mounted on a DST/N trolley.

Available on request to allow the hoist to oscillate with respect to the vertical axis of the running beam.

QUALITY PRODUCTS OF A LEADER COMPANY

Donati range of products

Donati range of products meets the demands of hoisting equipment for manufacturing industry applications, offering an incomparable relation between quality and price coupled with professional design.

The electric chain hoist DMK series with capacities up to 4.000 Kg, the hand-push and powered slewing jib cranes, the electric wire rope hoist DRH series with capacities up to 50.000 Kg, the suspended DSC channel profile systems and the wheel drive unit DGP, represent solutions for handling problems safely and economically.

Special versions for all products and also versions with CSA/US approval are available on request.

The constant care of DONATI SOLLEVAMENTI S.r.l. over the customer satisfaction is directed to establish a long-term relation, based on the mutual respect and trust, thanks to the flexibility and promptitude of the organization and to the direct and personal contact.

The after-sales service is organized in order to give prompt answers and solutions about spares-parts, service and warranties procedures.

Since 1930 DONATI SOLLEVAMENTI S.r.l. has become more and more successful in international markets for lifting equipment, due to our flexible, technological and design innovation.

The experience of many years of qualified presence in the market and the precise will to face the issues about safety and conformity to the rules without any compromises are a guarantee of safety and reliability.

The constant quality and reliability of all our products and services are granted from the certification of our internal quality insurance system, regulated since 1993,

Donati organization, starting from the control of the materials and of the manufacturing process till the finished products.

DONATI SOLLEVAMENTI S.r.l.
offer a range of products
in line with the most
modern international
regularity standards.

CERTIFICATES AND GUARANTEES

the design and assembling process

The on going and careful attention to quality by Donati Sollevamenti S.r.l seen, not only through our careful design, responsible choices and constant checks of materials, of all phases of production and of the finished product, but it also involves the whole organisation, through the quality control system which, since 1993, controls and checks the life of the whole company.

The integrity in the design and production of all Donati products would not be complete without the careful consideration of the international regulations referred to which give a guarantee of safety for the Client and user and acts as a passport for internationalisation and diffusion of our products throughout the world. In this light we recommend reading the recent CSA approval with extension ANSI/UL of the DRH rope hoists and relative accessories and translation trolleys made in special execution for the north American market.

The DRH series electric rope hoists and related trolleys are designed and produced taking into consideration the "**Essential Requirements of Safety**" in **Attachment I of the Community Directive 2006/42/CE**, denominated Machine Directive and with CE mark and CE declaration of **Attachment IIA**.

Furthermore, the DRH series hoists and related trolleys conform to the following Directives:

- **Low Voltage Directive (DBT) 2006/95/CE;**
- **Electromagnetic Compatibility Directive (EMC) 2004/108/CE.**

Regulatory framework

The following are the main technical rules and regulations which were taken into consideration during the design and assembling process of the DRH series electric rope hoists:

- EN 12100 part: 1^a - 2^a/2005 "Safety of the machinery"
- EN ISO 13849-1/2008 "General principles for design"
- EN 12077-2/2008 "Limiting and indication device"
- EN 13001-1:2009 "General design criteria – Part 1: general requirements"

- EN 14492-2:2006 "Winches and hoists – Part 2: Hoists"
- EN 60204-32:2006 "Safety of machinery electrical equipment of machines"
- EN 60529/92 "Degrees of protection provided by enclosures (IP code)"
- ISO 4301-1:88 "Lifting equipment classification"
- ISO 4308-1:87 "Selection of wire ropes (for wire rope hoists DRH series)"
- DIN 15401 "Lifting hooks for lifting appliances; Single hooks"
- UNI 9466 "Lifting appliances shell drum. Design

- requirements (for wire rope hoists DRH series)"
- FEM 1.001/98 "Rules for the design of hoisting appliances"
- FEM 9.511/86 "Classification of mechanisms"
- FEM 9.661/86 "Dimensions and design of rope reeling components"
- FEM 9.683/95 "Selection of lifting and travel motors"
- FEM 9.755/93 "Measures for achieving safe working periods for serial hoists units (S.W.P.)"
- FEM 9.761/93 "Lifting force limiters for controlling the loading of motorized series hoists mechanisms"
- FEM 9.941/95 "Graphical symbols for control devices"

Criteria and condition of use

- Correctly determine the operating limits of the hoist in order to ensure the correct functioning and the complete correspondence to the operating systems of the work for which it is intended.
- The FEM 9.511 rule allows the classification of hoists according to the conditions of use.
- The necessary parameters to determine the limits of use for electric wire rope hoists are the following:
 - 1) Actual lifting capacity
 - 2) Stress level
 - 3) Average duration of daily use

1) Actual lifting capacity

- This is determined by the heaviest load to be lifted.

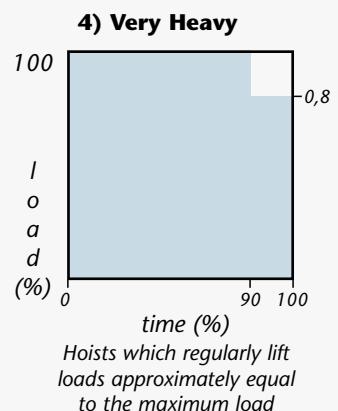

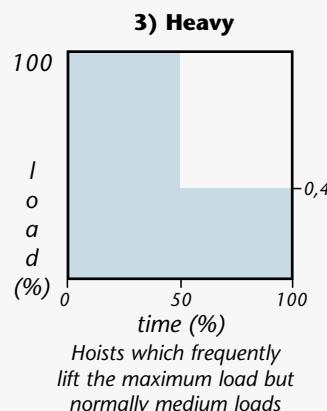

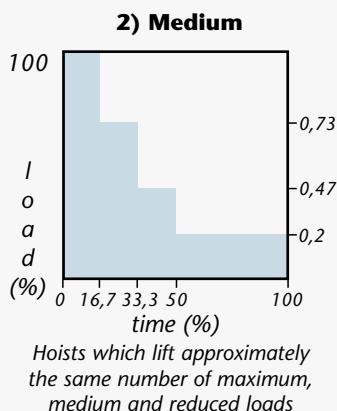

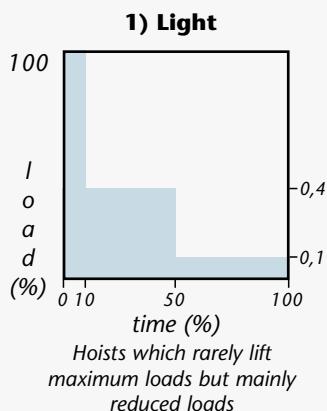

The nominal lifting capacity of the hoist must be \geq the actual lifting capacity

Lifting capacity = kg

2) Stress level

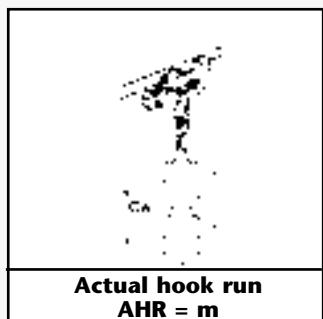

- The stress level is determined considering the actual entity of the loads lifted and it is ascribable to one of the four spectrums of load shown below which determine the type of service.

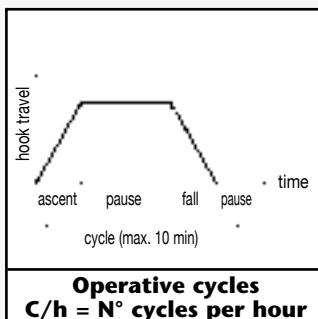

3) Average duration of daily use - T_m =Hours

- For lifting operations the average duration of use is calculated in the following way:

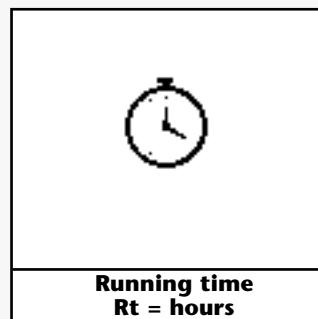

$$T_m \text{ (hours)} = \frac{AHR \times C/h \times Rt}{30 \times S}$$

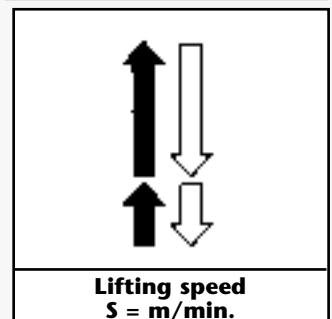

It is the average of the actual runs of the load

It is the number of complete ascents and descents carried out in an hour

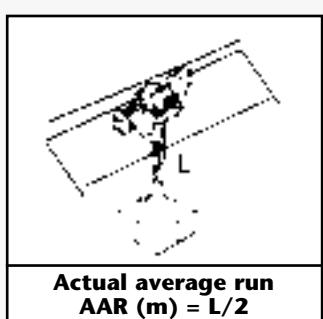

Hoist running time in a whole day

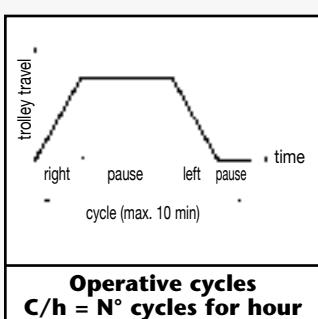

It is the distance covered by the load in a minute

- For travel operations the average duration of use is determined in the following way:

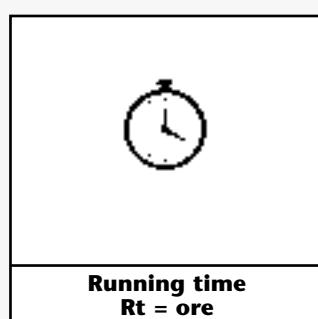

$$T_m \text{ (hours)} = \frac{AAR \times C/h \times Rt}{30 \times S}$$

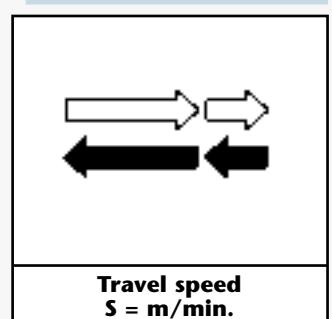

It is the average of the length L of the trolley running beam

It is the number of complete runs (right/left) carried out in an hour

It is the running time of the trolley in a day

It is the distance covered by the trolley in a minute of continuous running

Choice criteria and condition of use:

- According to the type use, that determine the **stress level** and the **average duration of daily use**, for lifting and/or travelling, using the following table the identification group of the related mechanism are classified and then, according to the lifting capacity, the type of hoist is determined.
- Once the type of hoist is identified, it's important to check the related life time in terms of hours of service and of the total number of cycles in 10 years of operations.

Classification and limit of use of the electromechanisms of lifting equipments							
	Tm = Daily running time (hours)	≤ 2	≤ 4	≤ 8	≤ 16	> 16	> 16
1) Light Load	Life of the mechanisms in 10 years operations (hours)	3200	6300	12500	25000	50000	100000
	N° maximum of cycle of work in 10 years operations (Σ cycles)	250x10 ³	500x10 ³	100x10 ⁴	200x10 ⁴	400x10 ⁴	> 4x10 ⁶
	Tm = Daily running time (hours)	≤ 1	≤ 2	≤ 4	≤ 8	≤ 16	> 16
2) Medium Load	Life of the mechanisms in 10 years operations (hours)	1600	3200	6300	12500	25000	50000
	N° maximum of cycle of work in 10 years operations (Σ cycles)	125x10 ³	250x10 ³	500x10 ³	100x10 ⁴	200x10 ⁴	400x10 ⁴
	Tm = Daily running time (hours)	≤ 0,5	≤ 1	≤ 2	≤ 4	≤ 8	≤ 16
3) Heavy Load	Life of the mechanisms in 10 years operations (hours)	800	1600	3200	6300	12500	25000
	N° maximum of cycle of work in 10 years operations (Σ cycles)	63x10 ³	125x10 ³	250x10 ³	500x10 ³	100x10 ⁴	200x10 ⁴
4) Very heavy Load	Tm = Daily running time (hours)	≤ 0,25	≤ 0,5	≤ 1	≤ 2	≤ 4	≤ 8
	Life of the mechanisms in 10 years operations (hours)	400	800	1600	3200	6300	12500
	N° maximum of cycle of work in 10 years operations (Σ cycles)	32x10 ³	63x10 ³	125x10 ³	250x10 ³	500x10 ³	100x10 ⁴
Service group of the mechanisms of lifting and travelling	as per ISO 4301-1	M3	M4	M5	M6	M7	M8
	as per FEM 9.511	1Bm	1Am	2m	3m	4m	5m
Intermittent use according to FEM 9.683/95	Hoist mechanisms	Ratio of intermittence (RI%)	25	30	40	50	60
		Maximum N° of start-ups per hour (A/h)	150	180	240	300	360
		Maximum N° of cycles per hour (C/h)	25	30	40	50	60
Temporary use	Trolley mechanisms	Ratio of intermittence (RI%)	20	25	30	40	50
		Maximum N° of start-ups per hour (A/h)	120	150	180	240	300
		Maximum N° of cycles per hour (C/h)	20	25	30	40	> 60
Two-speed double-polarity motors		Running time at main speed (min)	15	15	30	30	60
		Running time at low speed (min)	2,5	3	3,5	4	5
		Maximum N° of start-ups per hour (A/h)	10	10	10	10	10
Maximum N° of start-ups per hour (A/h)	Fast speed	1/3 (33.3% of total N° start-ups per hour)					
	Low speed	2/3 (66.7% of total N° start-ups per hour)					
Tm = Daily running time (hours)	Fast speed	2/3 (66.7% of the average daily running time)					
	Low speed	1/3 (33.3% of the average daily running time)					

Example:

Capacity = 6300 kg Level of stress = 2) Medium Load Actual hook run (AHR) = 2,5 m N° of cycles per hour (C/h) = 8
 Daily running time (Rt) = 8 h Lifting speed (S) = 4 m/min (4/1 rope falls) N° of working days per year = D/y 220

1) Calculation of the average daily running time:

$$Tm \text{ (hour)} = (AHR \times C/h \times Rt) / (30 \times S) = (2,5 \times 8 \times 8) / (30 \times 4) = 1,33 \text{ h}$$

In the table in section 2.2.7, in relation to the Capacity (6300 kg), at a Medium level of stress (2) and at an average daily running time (Tm = 1,2h) it is possible to determine the rope hoist, with 4/1 falls of rope, which is:

Service Group FEM 1Am – Type DRH 24L1•M

2) Check of the time of life:

Hours of running 10 years $Tm \times D/y \times 10 \text{ years} = 1,33 \times 220 \times 10 = 2933 \text{ (hours)}$ < of the 3200 (maximum hours possible) \Rightarrow ok
 N° of cycle of work in 10 years $C/h \times Rt \times D/y \times 10 \text{ years} = 8 \times 8 \times 220 \times 10 = 140800 \text{ (cycles)}$ < of the 250000 (maximum hours possible) \Rightarrow ok

Time of life of the lifting equipment:

- The time of life of the lifting equipment is determined from the **stress level**, the **real running hours** of each mechanism and the **number of cycles** of the complete machine. The **running hours** and **number of cycles**, in relation to the FEM/ISO of the lifting equipment selected are forecast to allow a safe life period of 10 years.
- After 10 years the lifting equipment could have finished the life of service in relation to the related group of service. For this reason at the due time of 10 years the equipment **SHOULD NOT be put any more in service without an inspection by DONATI SOLLEVAMENTI S.r.l.** expert technicians in order to check if the equipment has still some **remaining working life**, so able to work in safe condition for a further period, the equipment has to be subject to a deep technical control of all the parts.

- ! • *The designation of the group of utilization of the wire rope hoist is shown on the label plate on the hoist (see paragraph 3.5.3 - List of labelling plates)*
 • *DONATI SOLLEVAMENTI S.r.l. guarantees the safe and lasting utilization only if the DRH electric wire rope hoist is used according to the corresponding parameters for the group of utilization foreseen.*

NOTE: ⁽¹⁾ This column indicates the FEM reference group for evaluation of normal conditions and/or the life span of the motoreducer only. The classification of the whole hoist, in any case, is the one defined in the relative FEM service group shown in the adjacent column.

⁽²⁾ Hoists with 2 falls of rope (2/1), a long (L) and extra long rope drum size 1 (X1) and hoists with 2 and 4 falls of rope (2/1 e 4/1) and an extra long rope drum size 2 (X2) use anti-twist ropes. The type of anti-twist rope is shown in brackets.

⁽³⁾ The extra long drums size 1 (X1) and size 2 (X2) are supplied without the protective roof.

Fixing of the DRH wire rope hoists in suspended or set-down execution

Fixing of hoists 2 and 4 ropes falls in suspended execution:
Details of the hole and of the connection area of the universal eyebolt.

The universal eyebolt suspension is supplied as a standard.
For dimensions I e I1 see page DRH of set-down/suspended suspension

Fixing in set-down execution hoists 2, 4, 6 and 8 ropes falls:
Details of the support foot and of the connection area of the universal set-down eyebolt.

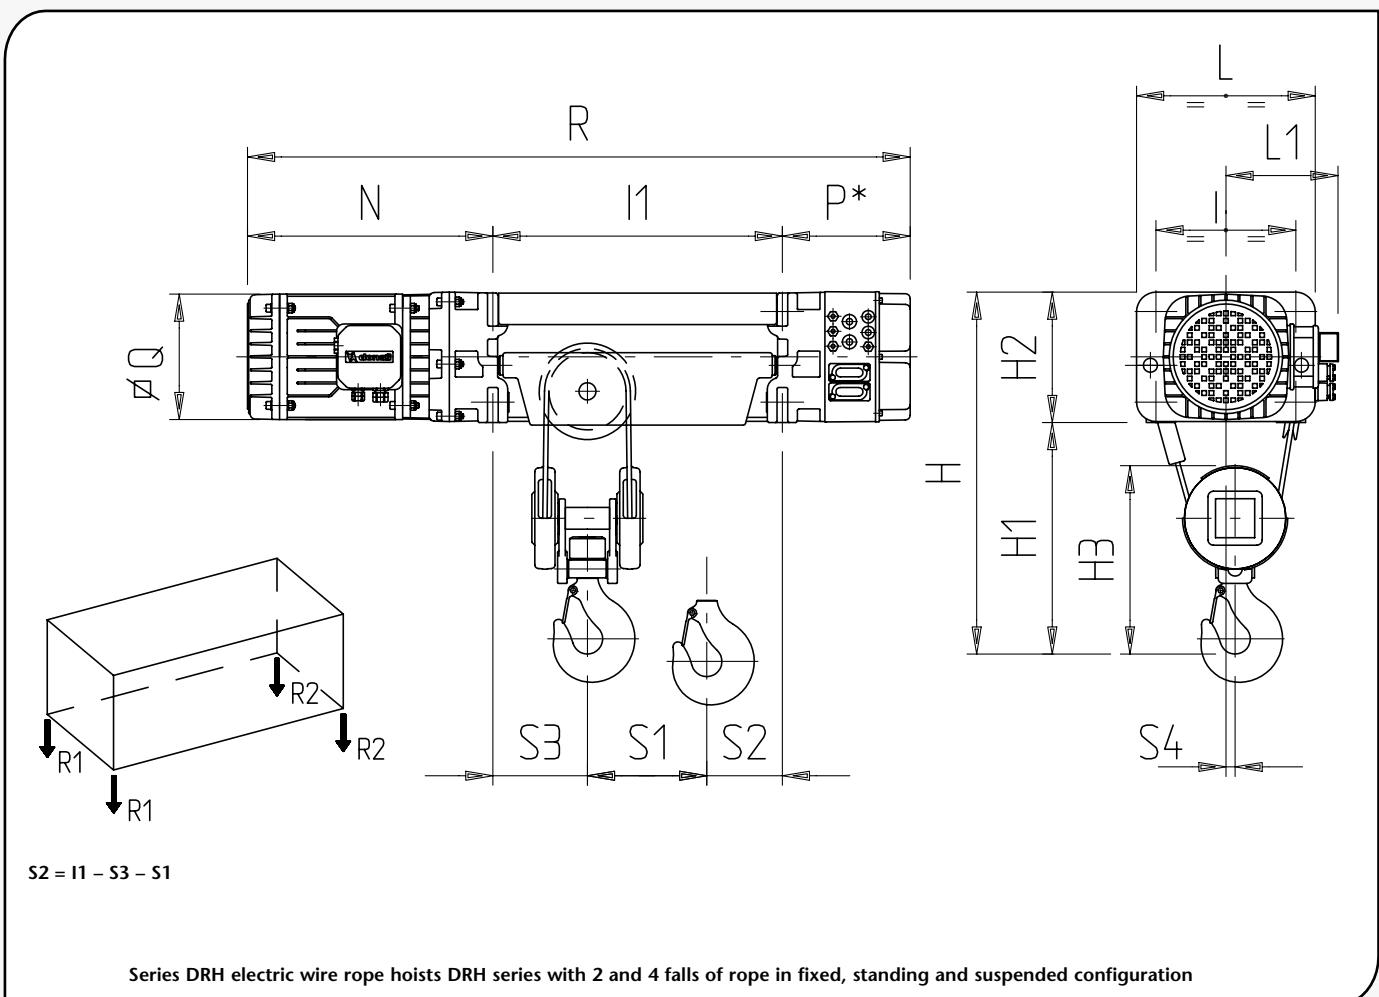

The universal eyebolt suspension is supplied as a standard.
For dimensions I e I1 see page DRH of set-down/suspended suspension

NOTE: Fixing of hoists 2, 4, 6 and 8 ropes falls in set-down execution:

- With universal eyebolt, the headroom of hoist (H2), has to be increased of "B6" dimension.
- On trolley DRT3/4 with DRH 6 and 8 ropes falls it's supplied the set-down staybolt as a standard.

DRT double girder trolleys for electric DRH wire rope hoists – 2 rope falls (2/1) and 4 rope falls versions (4/1) – Reactions on the supports see page 32

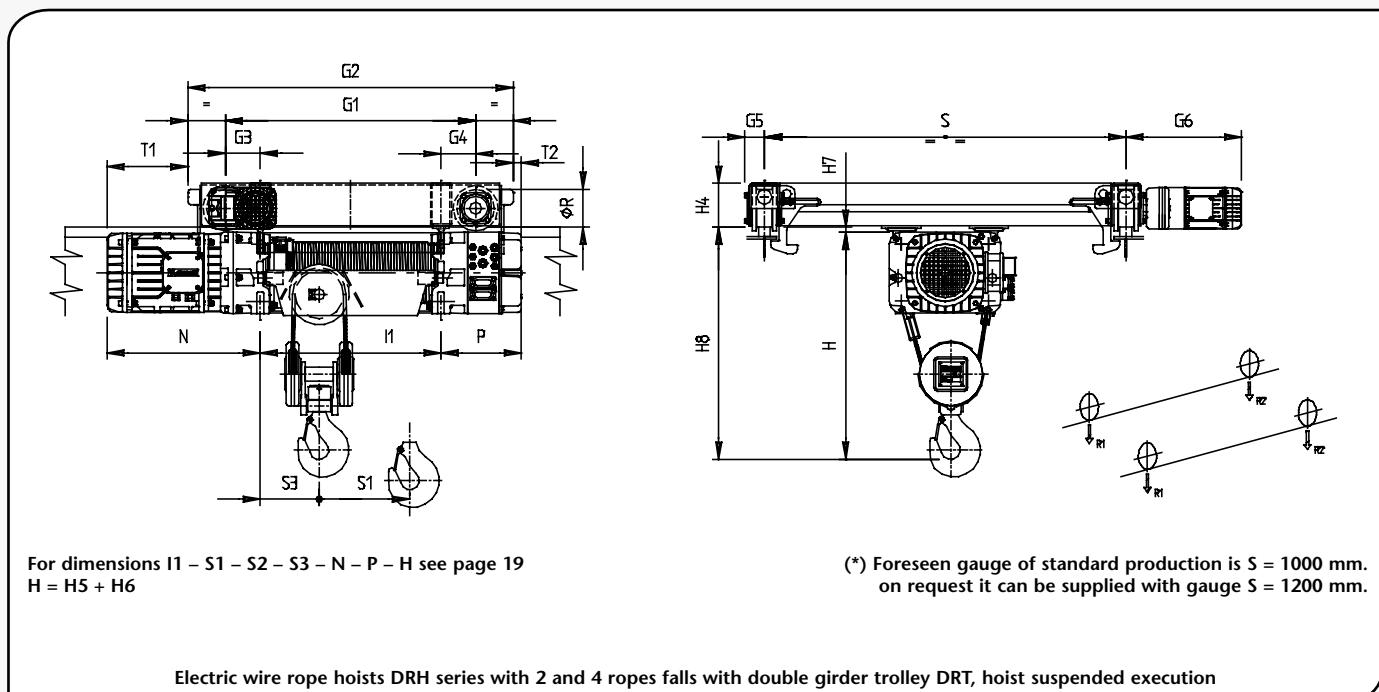

For dimensions I1 – S1 – S2 – S3 – N – P – H see page 19
H6 = H – H5

(*) Foreseen gauge of standard production is S = 1000 mm.
on request it can be supplied with gauge S = 1200 mm.

Electric wire rope hoists DRH series with 2 and 4 ropes falls with double girder trolley DRT, hoist set-down execution

- The articulated DST trolley are realized with 2 motoreducers. Powers stated in the table have to be doubled.

* The trolley DRT3 for hoists DRH4 at 6 ropes falls are realized with 2 motoreducers. The trolley DRT3 for hoist DRH3 at 8 ropes falls and only trolley gauge 2240-2800 is realized with 2 motoreducers. Powers stated in the table have to be doubled.

** The trolley DRT3 for hoists DRH4 4 rope falls, DRH3 6 ropes falls (trolley gauge 1200-1400) and DRH3 8 ropes falls (trolley gauge 1400) are realized with only one motoreducer.

*** The trolley DRT4 for hoists DRH4 at 8 ropes falls are realized with 2 motoreducers. The powers stated in the table have to be doubled.
